Summary

Computational Sciences student (AI concentration) working on AI safety research, LLM evaluation, and full-stack applications. Seeking Summer 2027 software engineering and applied AI opportunities.

Education

Minerva University, San Francisco, CA Expected Graduation: 12/27
B.S. Computational Sciences, Artificial Intelligence concentration GPA: 3.58
Coursework: Data Structures & Algorithms, Probability & Statistics, Harnessing Artificial Intelligence Algorithms, Complex Systems; in progress: Theory of Computation, Senior Tutorial: AI Lab

Research Experience

AI Safety Researcher | Minerva University Sep 2026 – Present

- Investigating whether LLM agents trust file metadata over official authorization facts, and the gap between what agents know is prohibited and what they do. Project in progress; secured funding from BlueDot Impact.

Projects

ReWear: Wardrobe App | Flask, React, SQLAlchemy, Docker Team project

- Trained a YOLOv8 clothing and color detection model and contributed Flask backend, database migrations, upload handling, and Docker setup.
- Fixed upload filename handling and database queries in the team-built wardrobe application.

Digital Twin | Qwen2.5, LoRA, RAG Ongoing

- Developed a personalization pipeline with Qwen2.5; compared LoRA, raw RAG, and reranked RAG configurations and built a live comparison demo. Ran a preliminary 10-record validation sweep with Groq-based judging.
- Evaluated personalized responses for similarity, persona, and authenticity across retrieval configurations.

MangaLens: LLM Agent Pipeline for Translation | Flask, React, Groq API

- Connected the OCR, context analysis, and translation pipeline to a React interface with streaming results.
- Used server-sent events to stream translation results to the interface bubble by bubble.

Experience

Teaching Assistant, CS152: Harnessing Artificial Intelligence Algorithms | Minerva University Sep 2026 – Present

- Teach and guide 100+ students through coursework on building AI agents, AI algorithms, and coding.
- Assess student projects and grade class contributions.

AI & Neural Networks Instructor | NeuroKids May – Aug 2026

- Led a seminar on secure development and vulnerabilities in AI-generated code for 110 students.
- Taught AI and neural network fundamentals to 15+ groups, adapting explanations to different skill levels.

Marketing & Market Analysis Intern | TechLabs (Yeppo) Jan – May 2025

- Produced 7 market reports across Korea, China, and the USA; contributed to a 25% increase in app downloads.

User Research Analyst Intern | Edgur May – Jul 2024

- Identified 3 behavioral patterns across traffic, engagement, and retention metrics using Python and SQL, informing content and product decisions.

AI Search & Content Moderation Analyst | Yandex Aug – Nov 2023

- Evaluated 1,800+ items against policy rubrics and documented 15+ circumvention patterns, including coded language and emoji evasion.
- Wrote structured reports for the algorithm team.

Skills

Programming & Data: Python, SQL, Pandas, Scikit-learn, Flask, React, TypeScript, Docker, A/B testing
AI/LLM: PyTorch, LoRA fine-tuning, RAG, LLM-as-judge evaluation, prompt engineering, agentic tool use, LLM APIs, Ollama, Qwen
Languages: Kazakh (native), Russian (fluent), English (fluent)
